Patient Participants Needed for Medical Research Study

"Understanding the Genetics and Neurobiology of Autism Spectrum Disorders"

Sponsored by An Autism Center of Excellence grant funded by the National Institutes of Health

Please call Lana Roth at (312) 413-4624 or Email us at autism@psych.uic.edu

The Autism Center of Excellence (ACE) is conducting research to better understand and diagnose:

**Autism, Asperger’s Syndrome, and Pervasive Developmental Disorders**

STARTS APPROVAL EXPIRES
DEC 2 2 2010 TO DEC 2 1 2011

UNIVERSITY OF ILLINOIS AT CHICAGO
INSTITUTIONAL REVIEW BOARD
Project Title

Interdisciplinary Studies of Insistence on Sameness in Autism Spectrum Disorders

Principal Investigators

Edwin Cook, Jr., M.D.
Institute for Juvenile Research
John Sweeney, Ph.D
Center for Cognitive Medicine

Goals

The overall goal of this study is to learn about the genetic influences and neurobiological substrates of autism and other autism spectrum disorders. In addition, we are studying the relationship of genes to medication response.

Eligibility Criteria

Genetics of Autism

- Ages 3-50
- Individuals who meet criteria for Pervasive Developmental Disorders (including Autism and Asperger's syndrome) and their biological parents and/or siblings
- No significant history of alcohol or substance abuse
- No current use of psychotropic medications, antidepressants, stimulants, or anti-psychotics

ACE Brochure v2 12/01/2008

Procedures

Diagnostic & Clinical Procedures:
Participants will receive detailed clinical diagnostic assessments for autism, cognitive testing, and a demographic/history assessment.

Biological Testing:
Blood will be collected from participants, including family members, for DNA analysis to investigate genetic influences in Pervasive Developmental Disorders.

Neuroimaging (if eligible):
- Ages 6-50
  Participants will undergo paper/pencil, computerized, and eye movement tests of memory, attention, and motor skills. Magnetic resonance imaging (MRI) scans will allow investigators to see the brain at work while participants are performing a memory or attention task.

Medication treatment (if eligible):
- Ages 5-50
  Interested and eligible participants can participate in a medication treatment study, involving an 8-week trial of Lexapro, an antidepressant that has shown promise in reducing some repetitive behaviors associated with autism spectrum disorders.

Location of Testing

Studies are conducted at the Institute for Juvenile Research (IJR) and the Neuropsychiatric Institute (NPI) at the University of Illinois at Chicago. IJR is accessible using public transportation. Parking validation is provided for those who travel to IJR by car.

Participant Payments

Participants will be compensated accordingly for each of the studies completed.

Contact

If you would like more information or are interested in referring patients for participation in this study, please call Lana Roth at (312) 413-4624 or email us at autism@psych.uic.edu.

We welcome referrals, comments, questions, and requests for information.
